

# DOC LIBRARY

Digital Reference Library for ID Checks With Mobile Phones

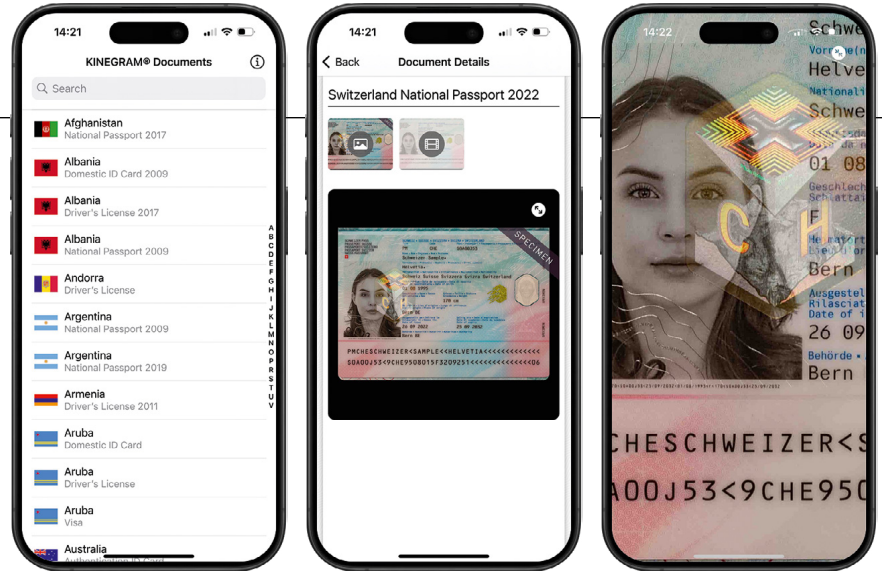

# About DOC LIBRARY

DOC LIBRARY contains high-resolution reference images and videos of ID cards, passports, visas and driver's licenses to support the mobile phone-based verification of these

documents. It consists of a document server and an associated app, which can be used to access electronic sample documents at any time.

## How DOC LIBRARY Works

With DOC LIBRARY, law enforcement personnel, border control officers or private security services can obtain comprehensive information about the main security elements of an unknown ID document. The high-resolution media also support police officers and other specialist personnel in checking ID documents. In addition, details of the personalization, further security elements as well as tactile print or design elements can be compared with the document in question. This enables making quick decisions as to whether a document is authentic or needs to be checked further, for example by way of forensic means.

## How You Benefit From DOC LIBRARY

DOC LIBRARY is supplied with a media database of the most important documents and can be connected to your own databases. Thanks to full synchronization with the document server, the DOC LIBRARY is then available offline on the work phone. This means that users can access the reference

materials even in remote areas without a permanent internet connection. Like all police apps from OVD Kinegram, DOC LIBRARY can be seamlessly integrated into existing apps and does not require any connections to third-party systems outside the police network.
